# **Central Infrastructure Domain**

**Privacy Threshold Analysis**

**August 2008**

## Summary

**Name of system:** Central Infrastructure Domain

**Description of system and purpose:** The Central Infrastructure Domain consists of the physical, link, and network communication layers at all locations on the agency's internet—its network of interconnected IP networks—except the headquarters of the Office of Cuba Broadcasting in Miami, Florida. The Central Infrastructure Domain is composed of switches and routers, along with the media connecting them, security firewall devices, network management systems, intrusion detection systems, wireless access points, and application servers (up to the operating system level), along with application “glue” services that provide a common environment for application software, such as name services and internal electronic mail relays, which typically are invoked by other application services rather than directly by end-users.

**Contact Name:** Sami Mousa 202-382-7228

## Privacy Threshold Analysis

1. Does this system collect, maintain or share personal information that can be used to directly or indirectly identify an individual?

No. A PIA is not required for this system. Skip to signature page and submit to Senior Agency Official for Privacy (SAOP).

Yes. A PIA is required for this system. Provide a detailed description of personally identifiable information this system will collect or store.

2. Does the system retrieve information using a personal identifier?

No. A Privacy Act SORN is not required for this system. Skip to signature page and submit to Senior Agency Official for Privacy (SAOP).

Yes. A Privacy Act SORN is required for this system. Provide a detailed description of personally identifiable information that will be retrieved from the system.

Is there an existing Privacy Act System of Records Notice (SORN)?

No. A Privacy Act SORN is not required for this system. Contact Senior Agency Official for Privacy (SAOP) for guidance to complete a SORN for the system..

Yes. The existing SORN may need to be modified to reflect system changes and/or information uses.
